

CLEAN AIR SOLUTIONS FOR HEALTHIER, MORE VIBRANT LIVING

Indoor Air Quality Products

Maytag High-Efficiency Electronic Air Cleaners

Cleaner air for a healthier home

The air we breathe can affect our health, comfort and productivity. Our well-insulated homes circulate pollen, mold, fungi, bacteria, viruses, dust and mites. And we add to the problem with tobacco, wood and cooking smoke; pet dander; insecticides; emissions from personal care products; household cleaners; and more.

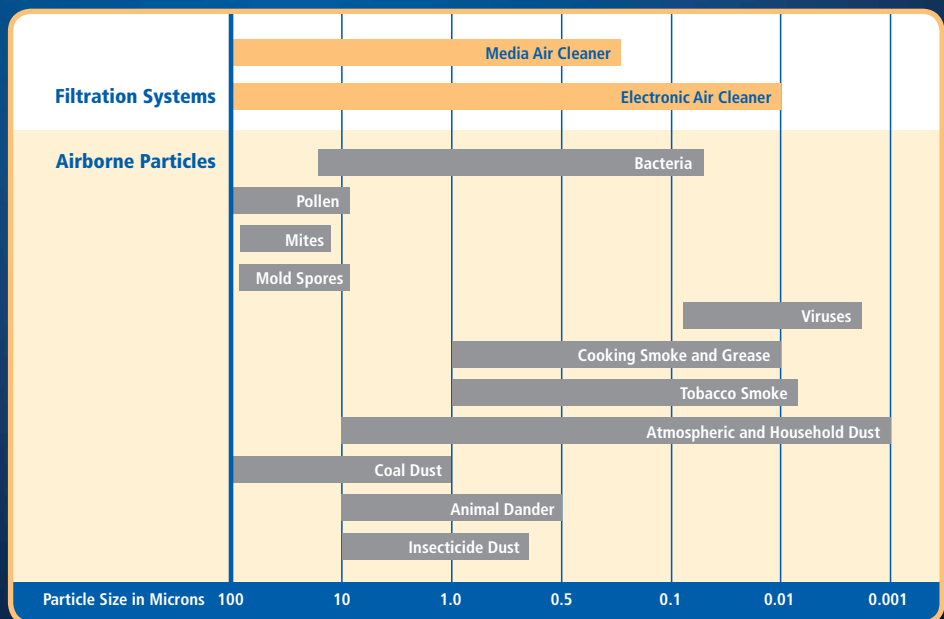

In fact, we inhale about 50,000 of these particles with every breath, and the average person takes 20,000 breaths every day! The cumulative effect of these pollutants can pose a health risk, especially for the young, elderly and chronically ill.

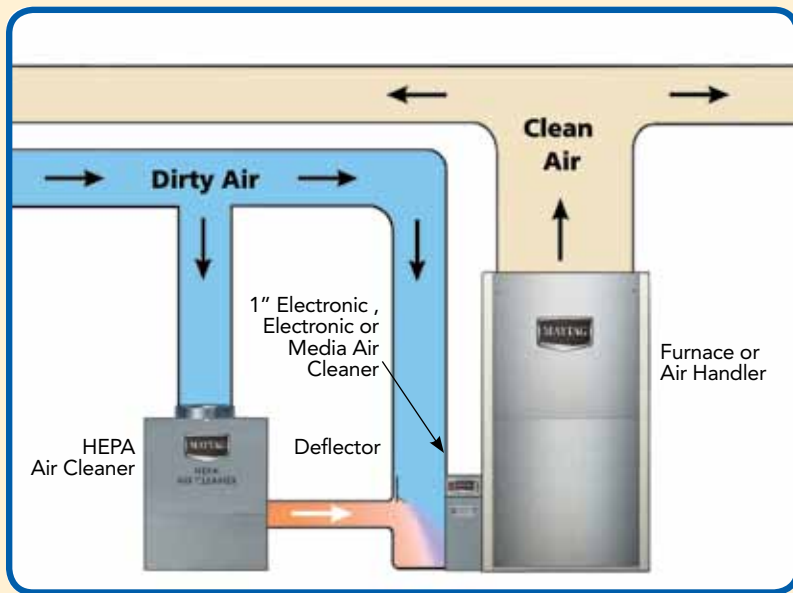

Whether the effects are short or long ranging, they can include symptoms like irritation of the eyes, nose and throat, headaches, dizziness, fatigue, tightness of the chest, shortness of breath and even colds or flu.

These contaminants also cause damage to walls, ceilings, upholstery, window coverings, electronics as well as other fixtures and furnishings.

Filtration Effectiveness Chart

Use this chart to determine the amount of effectiveness you require for your home's air filtration system.

Dual Air Cleaning System

For the ultimate clean air combination, combine an Electronic or Media Air Cleaner with the HEPA system.

1-Inch Electronic Air Cleaner

Improve indoor air filtration with an electronic air cleaner that can remove 95% of household allergens, such as dust mites, pollen and smoke.

Whole-House HEPA Air Cleaner

Finally the most powerful HEPA (High-Efficiency Particulate Air) Air Cleaners are available for your whole home. These are similar to the HEPA filters used for clean rooms and hospitals. The Maytag HEPA Air Cleaner connects to the return air duct and uses a three-stage filtration system.

As millions of airborne elements and gases travel through your heating and cooling system four to five times every hour, the Maytag HEPA Air Cleaner effectively filters 1/3 to 1/2 of this dirty air through its system. Your home can reach as many as 67 whole-house air changes per day depending on its size and the air cleaner model.

When you add a Maytag Electronic or Media Air Cleaner to your return air, your home can achieve from 96 to 120 whole-house air changes per day for a living environment with cleaner air.

Electronic Air Cleaner

The Maytag Electronic Air Cleaner uses an environmentally friendly, lifetime filter system that never needs replacing. It removes lung-damaging pollutants as small as 0.01 micron (1/2,540,000 of an inch).

Households with pets, or noticeable cooking or tobacco odors will experience a dramatic difference in air quality. The Maytag Electronic Air Cleaner protects and prolongs operating efficiency of heating and cooling equipment. Your indoor air quality will be fresher and more comfortable, year round. Plus, it simply washes clean, so you save money.

Media Retrofit Air Cleaner

This charged-media air cleaner uses a new technology in air filtration that yields a higher initial efficiency that it maintains over the life of the filter. It protects furniture and décor from staining dirt particles and prolongs the life of your heating and cooling equipment.

Additional Maytag® Products to Complete Your Indoor Comfort System

Zoning Products

Instead of trying to heat or cool an entire house with one thermostat, living spaces are essentially divided into separate comfort zones. Each zone has its own thermostat to set and monitor the ideal temperature.

Zone Control Panels

Damper

Whole-House Humidifier

Climates with dry air can irritate your skin and trigger allergies, as well as cause furniture and dry wall to crack. A whole-house humidifier helps maintain appropriate moisture levels within your home.

UV Air Treatment Systems

Installing an ultraviolet object purifier or Photo Catalytic

Oxidation (PCO) unit on your furnace or air handler helps remove mold, bacteria, and viruses that are found in the air stream and odors from the home.

Specifications and illustrations are subject to change without notice and without incurring obligation.

Programmable Thermostat

The thermostat automatically adjusts your indoor temperature to accommodate when you are in and out of the house, which helps reduce energy costs. Program five, two-day schedules by four specific time periods per day.

Heat/Energy Recovery Ventilator (HRV/ERV)

Since today's homes are better insulated, harmful pollutants can be trapped inside, resulting in these common health problems: asthma, allergies, headaches and coughs. Ventilators bring fresh air from outside to the inside of your home, diluting pollutants and replacing stale air.

Maytag's 12-Year Limited Warranty

Maytag equipment is dependable for the long haul, which is why we offer a 12-year Worry-Free limited parts warranty when installed and registered with a

Maytag heating or cooling system. Extended warranty programs and service agreements are also available. Ask your dealer for details.
