

Bosch solar thermal innovation.

Designed for everyday modern efficiency.

Since 1886, the Bosch brand has stood for first class technology, innovation, reliability and quality. Understanding the need to utilize renewable resources, Bosch has created an extensive solar thermal product line to save energy, reduce CO₂ emissions and contribute to energy independence while lowering monthly water heating bills through customizable solutions for any hot water need.

Solar water heating systems can make a substantial reduction in utility bills, saving you as much as 75% of the cost for water heating

Whether remodeling, building a new home, updating plumbing or water heating systems, there is no better time to enjoy the benefits of a Bosch solar thermal system:

- ▶ More than 25 years of solar thermal expertise
- ▶ Systems designed to facilitate upgrades for future expansion
- ▶ Confidence in being able to purchase all solar, tankless, boiler and heat pump needs through one source
- ▶ Reduce installation cost through "plug and play" components
- ▶ Reliable customer support with spare parts availability throughout North America
- ▶ Ideal for residential or commercial hot water, space heating and pool heating applications

Bosch products meet or exceed industry certification standards

Bosch products are also renowned for their reliability and longevity. All products are built using top-grade materials and tested to meet the highest standards for performance, sustainability and safety.
